

EV-PURE

MEDICINAL SIGNALING CELLS

DECELLULARIZED GROWTH FACTORS + CYTOKINES

EV-PURE is a decellularized product consisting of nano sized micropods containing growth factors, cytokines and nucleic acids secreted from the membranes of placental derived Medicinal Signaling Cells. The natural components in this product support healthy cell-cell communication and provide anti-inflammatory effects.

THE DIFFERENCE IS
PURE

EV-PURE Has Been Used by Medical Professionals to Offer Patients:

- Soft Tissue Repair
- Pain & Joint Management
- Cellular & Organ Health plus Detoxification
- Immunomodulator and Anti-Viral
- Aesthetics and Hair Restoration
- Restoring Sexual Wellness

PROCESS - SINGLE GENERATION HARVEST

We do not believe that harvesting from the same group of cells for multiple years is beneficial, we believe that practice compromises cellular health which in turn provides a low-quality product. Instead, we believe in finding the highest quality donors and harvesting from the healthiest part of the placenta to always start with fresh MSC's to produce the highest potency possible.

TESTING AND VALIDATION

20% of every lot manufactured is sent for sterility and endotoxin testing by a 3rd party laboratory. In addition, Vitti Labs requires a NanoSight Report for each lot and a biannual Characterization Report produced by external laboratories for transparency and validation.

REGULATIONS

Vitti Labs is an FDA-registered Tissue Bank which means we implement and maintain FDA regulations, prioritize legal counsel, and perform regular internal audits. Additionally, we implement AATB standards, follow GMP guidelines, and only work with tissue procurement organizations within the United States that follow ACOG requirements.
